Q17	A	B	C	D	E	F
Q18	A	B	C	D	E	F

D. Airborne

E. Design

F. Weight

3. Which force is caused by gravity and pulls the airplane down toward the Earth?

A. Weight

B. Aerodynamics

C. Thrust

D. Analysis

E. Drag

F. Wingspan

1. For a paper airplane, where does the thrust come from?

A. The person throwing it

B. High air pressure

C. A jet engine

D. A rocket

E. A propeller

F. The wings

2. Which force acts opposite to the direction of motion and tends to slow the plane down?

A. Scientific Reasoning

B. Lift

C. Drag

4. To fly successfully, the force of lift must be greater than which force?

A. Thrust

B. Weight

C. Distance

D. Drag

E. Friction

F. Speed

5. Air moves slower under the wing, which creates a lifting force. Where is this high pressure located?

A. Under the wing

B. Inside the paper

- C. At the back of the plane
- D. In the person's hand
- E. At the front of the plane
- F. Above the wing

- B. Lift
- C. Thrust
- D. Weight
- E. Gravity
- F. Friction

6. What do we call the distance from the tip of one wing to the tip of the opposite wing?

- A. Meter
- B. Performance
- C. Aerodynamics
- D. Wingspan
- E. Analysis
- F. Distance

7. Weight acts in a downward direction toward the Earth. What causes this pull?

- A. Thrust
- B. Friction
- C. Air pressure
- D. Propellers
- E. Speed
- F. Gravity

8. What is the force that moves a paper airplane forward in the direction of motion?

- A. Drag

9. How can you increase the thrust of your paper airplane?

- A. Increase the wingspan
- B. Make the wings smaller
- C. Change the material
- D. Point it toward the ground
- E. Use heavier paper
- F. Throw it harder

10. Which part of the airplane is responsible for creating most of the lift?

- A. The engine
- B. The nose (front)
- C. The tail
- D. The material
- E. The wheels
- F. The wings

11. In a science experiment, what do we call a single test conducted to check performance?

- A. A lift

B. A design

B. Gram

C. A drag

C. Meter

D. A trial

D. Kilogram

E. A weight

E. Liter

F. A thrust

F. Second

12. Drag is caused by differences in air pressure or by what?

15. What do we call the substance (like paper) that an object is made from?

A. Lift

A. Performance

B. Friction

B. Analysis

C. Weight

C. Trial

D. Gravity

D. Wingspan

E. Airborne

E. Material

F. Design

F. Thrust

13. What is the force that holds an airplane in the air?

16. Why is the front of an airplane narrow?

A. Performance

A. To catch more air

B. Thrust

B. To make it easier to hold

C. Meter

C. To help it stay airborne

D. Material

D. To create less drag

E. Trial

E. To increase the weight

F. Lift

F. To use less material

14. Which unit of measurement would you use to measure how many meters your plane flew?

17. What is the name for the study of how air interacts with solid objects like airplanes?

A. Degree

A. Weight Analysis

B. Scientific Reasoning

C. Material Science

D. Aerodynamics

E. Performance Trial

F. Design Meter

18. When air travels around a wing, it moves faster over the top. This creates what?

A. Low pressure above the wing

B. More drag

C. Steady flight

D. High pressure above the wing

E. More weight

F. A shorter wingspan
