Total Points: [10] [U1HW8 - W11 - Ball Tosser 1]

Instructions: Refer to the PDF or the paper version of the report, to answer the following questions: ball tosser.pdf
Offline Paper HW: U1HW8 - W11 - Ball Tosser 1_questions.pdf

1. What happens to a ball when it is thrown with more force?

- It travels a longer distance.
- It feels lighter.
- It stops moving completely.
- It changes its color.
- It makes a louder sound.
- It travels a shorter distance.

Answer:

_____

_____

_____

2. The path a ball takes as it flies through the air is called its:

- speed.
- weight.
- force.
- temperature.
- fulcrum.
- trajectory.

Answer:

_____

_____

_____

3. What is the name of the force that always pulls a flying ball back down to the ground?

- Elastic force
- Pushing force
- Gravitational force
- Magnetic force
- Wind force
- Frictional force

Answer:

_____

_____

_____

4. If you launch a ball straight up into the air at a 90-degree angle, where will it most likely land?

- Far away from where it started.
- Ten feet to the right.
- Behind where it started.
- It will keep going up and not come down.
- In the same spot it was launched from.
- Ten feet to the left.

Answer:

_____

_____

_____

5. To make a ball travel the farthest distance, which launch angle is often the most effective?

- A straight-up angle of 90 degrees.
- A middle angle, like 45 degrees.
- A very low angle, like 10 degrees.
- A very high angle, like 80 degrees.
- A zero-degree angle.
- All angles make the ball go the same distance.

Answer:

_____

_____

_____

6. In a catapult, what is the stiff arm that pivots to throw an object called?

- A wheel
- A spring
- A rope
- A lever
- A gear
- A screw

Answer:

_____

_____

_____

7. What is the correct name for the pivot point that a lever pushes against?

- A fulcrum
- A load
- A handle
- A container
- A force
- A base

Answer:

_____

_____

_____

8. When a rubber band is stretched back on a launcher, what type of energy does it store?

- Kinetic energy
- Heat energy
- Sound energy
- Light energy
- Electrical energy
- Potential energy

Answer:

_____

_____

_____

9. Newton's first law of motion states that a moving object will keep moving until what happens?

- It gets tired and decides to stop.
- It runs out of its own energy.
- Another force acts on it.
- It gets bored of moving.
- It becomes too old to move.
- It changes its mind.

Answer:

_____

_____

_____

10. What is the very first step you should take when beginning a new engineering challenge?

- Build
- Test
- Revise
- Evaluate
- Plan
- Share

Answer:

_____

_____

_____
